Jeremy:

Earlier today MJB&A released a report, Environmental and Social Performance Indicators for Natural Gas Production, on behalf of the 9 member companies of the Natural Gas Supply Collaborative (NGSC). The NGSC encourages natural gas producers to voluntarily report on 14 key environmental and social performance indicators including methane/air emissions, water, chemical use, community and safety.

The NGSC is a voluntary collaborative of natural gas purchasers that are promoting safe and responsible practices for natural gas supply. NGSC participants are some of the largest natural gas purchasers in the country and include: Austin Energy, Calpine Corporation, Consolidated Edison Company of New York, Los Angeles Department of Water and Power, National Grid, NRG Energy, NW Natural, Pacific Gas and Electric Company and Xcel Energy. The NGSC participants believe that broader information sharing supports a virtuous cycle where companies highlight their approaches to managing natural gas development, stakeholders benefit from having more information on leading practices and stakeholders as well as the public gain greater insights into how companies are protecting the environment and local communities.

In the future, the NGSC will continue to be engaged with natural gas producers and other stakeholders to build on this report and to highlight leading practices producers use to protect the environment and local communities. Please contact me or Rob LaCount, the NGSC project lead for MJB&A, if you have any questions or would like additional information.

To review the report and related information please visit: www.mjbradley.com/NGSC

Thank you,
Michael
